

**refinements**

`.mapResponseToState()`

*finds its attributes, and puts them in the result*

A diagram showing the relationship between Algolia and InstantSearch. A thick black arrow points from the left towards a rounded rectangle labeled "InstantSearch". A curved black arrow points from the "InstantSearch" box back to the text ".mapResponseToState()", which is accompanied by a descriptive comment. The word "refinements" is placed above the curved arrow.

**InstantSearch**
