

**refinements**

`.mapResponseToState()`

*finds its attributes, and puts them in the result*

A diagram showing the relationship between Algolia and InstantSearch. A thick black arrow points from the Algolia logo to a rounded rectangle labeled "InstantSearch". A curved black arrow points from the text ".mapResponseToState()" to the "InstantSearch" box, with the word "refinements" above it. Below the function name is a descriptive italicized text.

**InstantSearch**
